

Cannabis seeds for cool climate

All cannabis seed strains don't offer the same kind of results across all the climatic conditions. Different strains are suitable for varying climates. When considering the best strains to be grown under colder climates, the topmost considerations need to be the ability of the seeds to resist pests and moulds that are common in such conditions and a short flowering time so that they can finish before the extreme weather conditions.

The collection of our outdoor cannabis seeds for cool climate possesses all these properties. They score high when it comes to pest and mould resistance. Secondly, they also have quick flowering periods, which means you are ready to harvest your cannabis plants at just the right time.

Each strain in this category is hand-picked by our expert cannabis breeders and they are sure to provide great results. Simply browse through our collection of cannabis strains for cold climates and choose the one that you like the most.
